Power Solutions

CHEROKEE SPUR
C A S E   S T U D Y

01 January - 01 October

Address: Shop U45, Bedford Centre, Smith Rd, Bedfordview, Germiston, 2007

> "Energyrite saved Cherokee Spur almost a R 100 000 by having accurate records that could be compared to the meter reading company's figures. Thanks, Scott and his team for an excellent job!"

Carbon Reduction

Spurring Business Growth with Energy Efficiency

This case study demonstrates EnergyRite's ability to identify and solve complex energy challenges that would have otherwise gone unnoticed. By utilizing EnergyRite's metering data management systems, the client was able to rely on their commitment to delivering top-notch solutions and unparalleled service.

A Faulty Meter:
The Culprit Behind Excessive Billing

EnergyRite assisted Cherokee Spur, a restaurant in Bedfordview, Johannesburg, by using its data as a check meter to prove an excessive billing error. The landlord meter had a technical fault, causing the demand data (kVA) to double in the first 30-minute interval after Eskom power was reconnected following a load-shedding event. Without EnergyRite's data, the owner of the business could not query the excessive billing.

The Need for Data as a Check Meter

EnergyRite's data allowed them to identify the excessive billing error, which was impossible to find without their help, saving Cherokee Spur just under R100k. The data also helped EnergyRite prove where the billing error was, which served as a crucial tool in negotiating with the landlord.

Our Expertise Saves the Day (and R100k)

EnergyRite's metering data management systems provide clients with real-time information on their energy consumption and billing accuracy. Cherokee Spur was able to see a significant decrease in their monthly energy costs and eliminate any billing discrepancies.
