Halfway House Estate, Midrand, 1685

## Water Saving

*“Prior to Energyrite installing their water saving solution, we paid each month without considering a leak or any issue with the water bill. The real-time data showed us that we had a problem and we immediately asked our maintenance team to investigate, who then found and rectified two serious issues. We now have peace of mind that in the future, the platform will alert us of excessive water consumption.” Paul Roos, CEO Gunret Group.*

### Early Leak Detection at Gunret KFC Midrand Mall with Energyrite's Water Solution

Gunret KFC Midrand Mall, a long standing customer with energy monitoring and automation, recently installed Energyrite's water solution. Within one day of being installed, Gunret identified a water leak. The group's maintenance team investigated and identified a leaking toilet cistern, which they assumed was the issue.

### Additional Water Leak Discovered and Resolved with Energyrite's Analytics

The water consumption was reduced, but Energyrite's analytics system still indicated a high water consumption. The maintenance team were called back to the store to find the problem. After careful investigation, the team found another water leak, this time it was on the water pump.

### Significant Water and Cost Savings Achieved Through Leak Repairs at KFC Midrand Mall

With the high water usage, not only was the store paying excessive usage costs, they were also penalised by the Municipality for exceeding the liable commercial threshold of 200kl per month. Approx savings of 180l of water every hour 24/7 i.e.  $24 \times 180l = 4320l$  per day. Having fixed the two water leaks, the store is saving just under R12 000 per month.
